The Flight Status Results of Your Mission Space Lab Experiment!

enquiries@astro-pi.org <enquiries@astro-pi.org>

6. april 2021 kl. 12.34

Til: "rj@g.nagym.dk" <rj@g.nagym.dk>

Dear Rune Klarskov,

We are delighted to tell you that OttoAnna's Mission Space Lab experiment has achieved FLIGHT STATUS! Congratulations. You and your team should feel extremely proud.

Your experiment, along with the 213 others that have been selected, will start running on the ISS in April 2021. We will download and send your data back to you in early May. You can then start to write your final report, which is the last phase in the Mission Space Lab Challenge!

Coronavirus update

We understand that you and your team may be experiencing social distancing restrictions due to COVID-19. We appreciate that this will make it harder to get your team together to complete this year's European Astro Pi Challenge.

We have created [this online survey](#) to establish how easy or difficult it will be for you to coordinate your team to write your Phase 4 report (once you have received your experiment data). We will use your feedback to decide if we need to change the programme dates. Please complete the survey by **30 April 2021** so that we can make a final decision.

When you share the news of your flight status with your team, we

recommend that you start planning how you can collaborate online to write your report.

Congratulations once again,

The Astro Pi Team
